

Installing Cron in Nitix

1. Telnet into Nitix
2. Change directories to /home/log/Files

```
cd /home/log/Files
```

3. Download the cron installer

```
wget http://mars.net-itech.com/~jmoore/cron_install.tar.gz
```

4. Uncompress and untar the downloaded installer

```
tar -zxf cron_install.tar.gz
```

5. Run the installer

```
sh ./cron_install/cron_setup.sh
```

6. Installation is finished.

The installer will create a team named cron where the cron binary and crontabs are located. It also sets cron to start on boot by adding adding an execute command to */bootdisk/etc/rclocal*
